Social Skills Class

For children with autism or social skills needs

Building relationships can be difficult for high-functioning children with autism. Our 7-week classes teach children important social skills through repetition and practice. In this way, they experience social growth and development to enhance their chances for success in the classroom and other areas of life.

Space is limited. For more information, or to register for a class, call (608) 756-5555, ext. 8023, or email spate@mhemail.org.

Classes are funded through Mercyhealth Development Foundation's Autism Support Fund.
